Abstract: Competition in the cement industry is increasing with the opening of opportunities for foreign cement industries to take part in the country. This paper aims to re-examine the effect of sharing and leadership skills on work culture. The next research aims to know the effect of knowledge sharing and leadership style on employee performance. This research was conducted at PT. Semen Bosowa, which is located in Banyuwangi Regency. The number of employees owned by PT. Semen Bosowa, located in Banyuwangi, has 94 employees, all used as research samples (saturated samples). Descriptive analysis is used to describe respondents and variables in the study. The study used test tools to test the validity of research data and the reliability of research data to measure the questionnaire. PLS (Partial Least Square) analysis with the Smart PLS version 3 application was used to test the research hypotheses of 5 (five) direct hypotheses and two indirect hypotheses. The research results after the analysis is that knowledge sharing in PT. Semen Bosowa has no impact on the work culture of the employees. The leadership style in the organization has a positive impact on the work culture in the PT. Bosowa Banyuwangi. Knowledge sharing of employees of PT. Semen Bosowa turned out to be able to improve employee performance. The leadership style that exists at PT. Bosowa Banyuwangi has a positive and significant effect on employee performance. The next result is the work culture of the employees of PT. Bosowa Banyuwangi has no effect on employee performance.

Keywords: Knowledge Sharing, Leadership Style, Work Culture, Employee Performance

One of the determining factors for the success or failure of a company is the management of its human resources. Human resources

are crucial for a company to run well (Azhad et al., 2015). The company's human resources are the main pillar and driving force in an effort to realize the company's vision and mission. Without human resource management, it will be difficult for the com-

pany to achieve targets even though other resources have been met (Qomariah, 2020a). Therefore, the potential of existing human resources in the company needs to be developed and considered to become professional and quality human resources to impact the company’s success. Organizations with quality human resources will be able to improve employee performance, which will also impact organizational performance.

Sumber: PT. Semen Bosowa Banyuwangi (2020)

PT. Semen Bosowa Banyuwangi, a decrease in employee performance during the Covid-19 Pandemic, imposed Large-Scale Social Restrictions (PSBB) in 2020. This policy was replaced with the Implementation of Community Activity Restrictions (PPKM) in 2021. Implementing the new normal leadership role is also very important to anticipate employees continuing to comply with health protocols. PT. Semen Bosowa has several industrial areas, including a factory in Maros, a factory in Batam, and Banyuwangi. The Maros factory, located in South Sulawesi, has a cement production capacity of 4.2 million tons per year. The Batam factory is located in the Riau Islands, with a marketing area in the western part of Indonesia and a cement pro-

duction capacity of 1.2 million tons per year. The Banyuwangi factory is located in East Java, supplying consumers in Java, Bali, and Nusa Tenggara. The production capacity of this factory is 1.8 million tons per year. Due to the large number of consumer demands originating from Java, Bali, and Nusa Tenggara islands, flat storage was built, located on Jalan Raya Situbondo-Tanjung Wangi Harbor Complex, Banyuwangi. Although it is one of Indonesia’s largest private cement industries, this industry may have experienced a decline in production. The decline in production can be influenced by several factors, including leadership, knowledge-sharing application, and organizational culture, which affect employee performance. The decline in production can be seen in Table 1.

Several studies on the effect of knowledge sharing and leadership style on employee performance with work culture as an intervening variable have been carried out in several organizations and companies, both state and private. Several studies have shown that knowledge sharing positively affects employee performance (Astitioni and Sintaasih, 2019). Research from Safitri et al. (2018) also shows that knowledge sharing can improve performance. Research from Giri (2011), Wang et al. (2013), Hamzah (2018), Khaerana and Mangiwa (2021), Maulana et al. (2018), Anggita and Kawedar (2017), Erwina and Mira (2019), Firmaiansyah (2014), Rumijati (2020), Memah et al. (2018), Aristanto (2017) also stated that knowledge sharing could affect employee performance in an organization. The existence of knowledge sharing will help improve employee performance by enriching knowledge among employees in a company. The results of previous studies which showed that leadership style could improve employee performance are carried out by Mudawiyah et al. (2019), Riyadi (2020) (Ayuningtyas and Utami, 2019) (Birasnav, 2014; and Basit et al., 2017), Khairizah et al. (2015), (Priyono et al., 2018), (Vidianingtyas and Putri, 2014). Research by (Hafifi et al., 2018), (Saleh et al., 2016), (Ishak et al., 2019), (Kurniawati and Tobing, 2019), (Andriani et al., 2018), (Qomariah et al., 2020c), (Hadiana and Mayasari, 2019), (Sugiyatmi et al., 2016), (Areiqat, 2020), (Bakker et al., 2022), (Abbas

et al., 2020), (Chandra et al., 2020), (Khan et al., 2021) state that knowledge sharing effect on employee performance. (Fikri and Setiawati, 2021), (Siagian, 2018), (Fonseca and Costa, 2020), (Bonaparte do Rêgo et al., 2017), (Afrizal, 2016), (Iman and Lestari, 2019), (Yuniarti and Suprianto, 2020), (Pancasila et al., 2020), (Paracha et al., 2012), (Sya'roni et al., 2018), (Wardani et al., 2017), (Bentar et al., 2017), (Hendrawan and Budiarta, 2018), (Qomariah et al., 2020c), (Qomariah, 2020b), (Kurniawan et al., 2021), (Qomariah et al., 2020c), (Atikah and Qomariah, 2020), (Alamanda et al., 2022), (Qomariah et al., 2022), (Chandra et al., 2020), (Qomariah, 2012). Research on the relationship between work culture and employee performance has been widely carried out with the result that work culture affects employee performance, among others, carried out by: (Adha et al., 2019), (Safitri, 2022), (Messner, 2013), (Yateno et al., 2022), (Antoro, 2014), (Ikhsan, 2016), (Rina and Perdana, 2017), (Sangadji, 2009), (Giri, 2011), (Ojo, 2009), (Saban et al., 2020), (Wambugu, 2014), (Rantesalu et al., 2017). Several studies that discuss the problem of sharing habits with leadership, among others, were carried out by: (Gholamzadeh et al., 2014), (Guterres et al., 2014), (Simbolon, 2017) (Ali, 2015), (Retno et al., 2018) the result is that leaders who can provide exemplary can improve the work culture of employees in an organization. Research conducted by Panggabean and Silvianita (2021) stated that sharing habits could improve organizational culture.

Saragih researched the relationship between knowledge sharing and performance with negative results stating that knowledge sharing has no effect on employee performance. While research which states that leadership has no effect on employee performance is carried out by: (Qomariah et al., 2021), (Setiawan and Qomariah, 2022). While the results of the research which stated that work culture has no effect on employee performance were carried out by (Adha et al., 2019), (Manggis et al., 2018), (Atikah and Qomariah, 2020b), (Darmanto and Supriyadi, 2022).

Based on the differences from the results of previous studies, it is interesting for researchers to conduct further research related to themes and con-

cepts, but with different subjects to employees of Private Owned Enterprises, namely PT. Cement Bosowa Banyuwangi. Based on the production data in Table 1, it can be seen that the amount of cement production has decreased. This condition can indicate that there is a decrease in the performance of employees of PT. Cement Bosowa Banyuwangi. Based on the phenomena and theories described, this study aims to find out and analyze with statistical tools the impact of knowledge sharing and leadership style on work culture in a company and the performance of employees who have worked at PT. Cement Bosowa Banyuwangi.

LITERATURE REVIEW

Employee performance

Performance can be interpreted as the work achieved by a person or group of people in an organization within a certain period of time following their respective authorities and responsibilities (Mangkunegara, 2016). Edison et al. (2016) stated that performance can be interpreted as a result of a process measured based on provisions and mutual agreement within a predetermined time. Meanwhile, Sedarmayanti (2017) stated that performance could be interpreted as the result of work achieved by a person or group of people in an organization in accordance with the authority and responsibility, which functions to achieve organizational goals legally, obey the law, according to morals, and ethics.

Knowledge Sharing

Knowledge sharing occurs between individuals in a community, where individuals interact and share knowledge with other individuals through virtual or face-to-face spaces, groups, and forums (Mathis et al., 2015). With employees willing to share the knowledge with colleagues in an organization, there will be employees who will understand something new. By understanding something new, employees in an organization can complete the tasks that have not been carried out before can finally be completed. Thus eating with an increase in knowledge sharing will improve employee performance.

Leadership

Leadership in an organization can also allegedly improve employee performance. According to (Rivai and Mulyadi, 2012), leadership style is a behavioral norm used by a person when that person tries to influence the behavior of others. Leadership style can allegedly affect the success of a leader in influencing the behavior of employees who become subordinates. Thus, the way employees complete the tasks assigned can also be influenced by their superiors or leaders. Yukl (2010) stated that leadership style could be interpreted as a process to influence others to understand and agree with what needs to be done and how the task is carried out effectively, as well as a process to facilitate individual and collective efforts to achieve common goals. Leadership style) will produce motivation as long as it makes subordinates feel the need for satisfaction in achieving effective performance and provides the teachings, direction, support, and rewards needed to achieve goals (Robbins and Coulter, 2010).

Work Culture

Work culture is a habit carried out repeatedly by employees in an organization that eventually becomes a permanent rule. Usually, people who violate this habit are not subject to strict sanctions. Still, from organizational behavior, morally, they have agreed that these habits are habits that must be adhered to in the context of carrying out work to achieve the goals set by the organization (Nawawi, 2011). These good habits that are always repeated will make employees accustomed to this behavior so that it will impact the tasks assigned to them, which can improve employee performance. Work culture can be divided into two elements: (1) attitude towards work, namely liking for work compared to other activities, such as relaxing, simply getting satisfaction from busy work itself, or feeling forced to do something just for survival. (2) behavior at work, such as the diligent, dedicated, responsible, careful, thorough, careful, strong will to learn their duties and obligations, likes to help fellow employees or vice versa (Ndraha, 2012). Schein (2010) stated that culture is a pattern of shared basic as-

sumptions that certain groups learn to overcome problems of external adaptation and internal integration. Culture is a total pattern of behavior seen in social life, art, religion, institutions, and all the work and thoughts of a human group. Culture can also be influenced by several factors, including knowledge sharing and leadership style. Sharing knowledge with colleagues is a method for a group to share their knowledge, techniques, experiences and ideas with other members in an organization. This habit of sharing good things will become a habit in an organization if implemented properly. Thus, this sharing habit will impact the work culture of employees in an organization. This opinion is in line with research (Panggabean and Silvianita, 2021) which stated that sharing habits could improve organizational culture. Leadership in an organization must be able to set a good example and be a role model for his subordinates. Leaders who can set an example will become a habit in the organization that their leaders always set a good example. Thus a good leader in an organization who can provide a good example can improve the organization's work culture.

Research Model

Based on the theory that underlies the research related to the concept and theme of the research, a research model is built that refers to the results of Path Analysis. The research model is shown in Figure 1.

HYPOTHESIS DEVELOPMENT

Knowledge occurs between individuals in a community, where individuals interact and share knowledge with other individuals through virtual or face-to-face spaces, groups, and forums (Mathis et al., 2015). Knowledge sharing is a very good behavior from an employee because they want to share knowledge with colleagues. If this good behavior is continuously carried out, it will improve the work culture in the organization. Panggabean and Silvianita (2021) stated that the habit of sharing could improve organizational culture.

H1: Knowledge Sharing Has an Influence on Work Culture

Figure 1. Conceptual Framework

Rivai and Mulyadi (2012) stated that leadership style is a behavioral norm used by a person when that person tries to influence the behavior of others. Leadership style can allegedly affect the success of a leader in influencing the behavior of employees who become subordinates. The leader must be able to change employee behavior in a positive direction which can later make subordinates do work with a sense of pleasure.

H2: Leadership Has an Effect on Work Culture

Rafiie (2017) stated that companies need management trends in their development time. One of the trends in management is knowledge management, which is a systematic process for sharing knowledge within an organization. Knowledge in knowledge sharing teaches that executives share their knowledge with subordinates so that knowledge is spread to all components of the organization. Having knowledge-sharing behavior from these employees will positively impact employee performance.

H3: Knowledge Sharing Has an Impact on Employee Performance.

Wirawan (2014) stated that leadership is a process of a leader creating a vision and interacting to influence each other to realize his vision. The function of leadership in an organization is to create a vision. Vision is a formulation of expectations for the progress of an organization. Yukl (2010) stated that there are several things, including involving key

stakeholders, identifying shared values and ideas, identifying strategic objects that have broad appeal, identifying relevant elements in the old ideology, linking the vision with the competencies of followers and past achievements, continually assessing and improving the vision to formulate a vision. Leaders who can provide role models will be able to improve employee performance.

H4: Leadership Has an Impact on Employee Performance.

Work culture is a habit carried out repeatedly by employees in an organization; violating this habit does not have strict sanctions. Still, the perpetrators of the organization morally have agreed that this habit is a habit that must be adhered to in the context of carrying out work to achieve goals. (Nawawi, 2011). If done repeatedly in an organization, this good habit will motivate employees to work even harder so that employee performance will be good too.

H5: Work Culture Has An Impact On Employee Performance.

Darudiato and Setiawan (2013) stated that knowledge management gives a positive impetus to an organization or company in its application, such as to increase value within the organization or company. The application of knowledge management consists of three components, among others: people, processes, and technology. This knowledge sharing will increase the knowledge of other employees in an organization. Continuous knowledge sharing will

become a good habit (work culture), impacting employee performance.

H6: Knowledge sharing influences performance through work culture.

Krisharyuli et al. (2020) stated that leadership is built on interrelated foundations. These principles include how individuals can interact effectively with contexts outside of themselves, build cooperation to achieve organizational goals, understand each other, and provide mutual input for progress in various organizational tasks and functions. Leaders must be able to set a good example that subordinates will imitate and adopt. Employees who work following the direction of the leadership will give good results. The good habits of this employee (work culture) will have an impact on improving employee performance.

H7: Leadership Has An Influence On Performance Through Work Culture.

METHOD

The design of this research is survey research. Survey research takes a sample from a population

and uses a measuring instrument in the form of a questionnaire to collect core data. This research was conducted to obtain objective and accurate primary data. This research on the influence of knowledge sharing and leadership on the work culture and employee performance was conducted at PT. Semen Bosowa, which is located in Banyuwangi Regency. This survey research was conducted in early 2022. The population used in this study were employees of PT. Semen Bosowa Banyuwangi has as many as 94 employees as of January 2021. The sample used in this study is 94, which is a saturated sample. Determination of the sample in this study using the census method, where all members of the population are used as research samples. Sources of data come from primary data and secondary data. Primary data is in the form of data obtained from distributing questionnaires to respondents (employees of PT. Bosow Banyuwangi) to obtain data that will be processed to answer the research hypothesis. Secondary data comes from information from libraries, the internet, and mass media. Data collection is done by 3 (three) kinds of techniques: interview techniques, questionnaires, and literature studies.

Table 2. Variable and Indicator

No.	Variable	Indicator	Source
1.	Knowledge Sharing	1. Embrained knowledge 2. Embodied knowledge 3. Encultured knowledge 4. Embedded knowledge 5. Encoded knowledge	Exellen (2020)
2.	Leadership	1. Directive leadership 2. Supportive leadership 3. Participatory leadership 4. Achievement-oriented leadership.	Robbins and Coulter (2012)
3.	Work Culture	1. Habits 2. Rules 3. Values	(Osborn and Plastrik, 2002)
4.	Employee Performance	1. Quality 2. Quantity 3. Punctuality 4. Cost Effectiveness 5. Coworker Relations.	(Bernardin and Russell, 2013)

The descriptive analysis was conducted to describe the respondents and variables in the study. Hypothesis testing is done using variance-based SEM or Partial Least Square (SEM-PLS) with the Smart PLS 3 SEM-PLS program. The variables used in this study consist of independent variables (knowledge sharing and leadership style), intervening variables (work culture), and dependent variables (employee performance). Exellen (2020) stated that knowledge sharing is a systematic process of sending, distributing, and disseminating knowledge and multidimensional contexts from a person or organization to others who need it through varied methods and media. Robbins and Coulter (2012) stated that leadership style is the interaction of two or more people (leader and subordinate) in carrying out the tasks that have been ordered in the company. Work culture is a set of behavioral feelings and psychological frameworks that are deeply internalized and shared by members of the organization (Osborn and Plastrik, 2002). Performance can be interpreted as achieving employee work results by implementing certain tasks by a person or group in an organization (Bernardin and Russell, 2013). The indicators of each variable are presented in Table 2.

Table 3. Characteristics of Respondents by Gender

Gender	Total	Percentage (%)
Man	91	96,8
Woman	3	3,2
Total	94	100

Table 4. Characteristics of Respondents by Age

Age	Total	Percentage (%)
20 – 30 years	33	35,1
31 – 40 ears	41	43,6
> 40 years	20	21,3
Total	94	100

RESULTS

Descriptive Statistical Analysis Results

Characteristics of respondents based on gender, age, and education are presented in Table 3, Table 4, and Table 5.

Table 5. Characteristics of Respondents Based on Education

Level of education	Total	Percentage (%)
Senior High School	46	48,9
Diploma	16	48,9
Bachelor	32	34,0
Total	94	100

Convergent Validity Test Results and Discriminant Validity Test

Convergent and discriminant validity tests were conducted to test the validity of a measuring instrument. The required value is more than 0.7. A value of 0.5 to 0.6 is still acceptable; if the value is less than 0.5, it must be removed from the model.

Reliability Test Results in Research

The reliability test is used to determine the indicators and measuring instruments in the construct, including composite reliability and Cronbach’s alpha, shown in Table 8.

Measurement Model Evaluation Results (Outer Model)

The measurement model (outer model) is calculated using the PLS Algorithm using the Smart PLS version 3 software, which is presented in Figure 1. The measurement model (outer model) aims to test the construct validity and reliability of the instrument. Figure 1 showed that the measurement model uses reflective indicators marked with arrows from latent variables to indicators. Each indicator has a loading factor that shows a large correlation to the latent construct. The loading factor value above the average indicates that this is the main indicator.

Table 6. Loading Factor Value

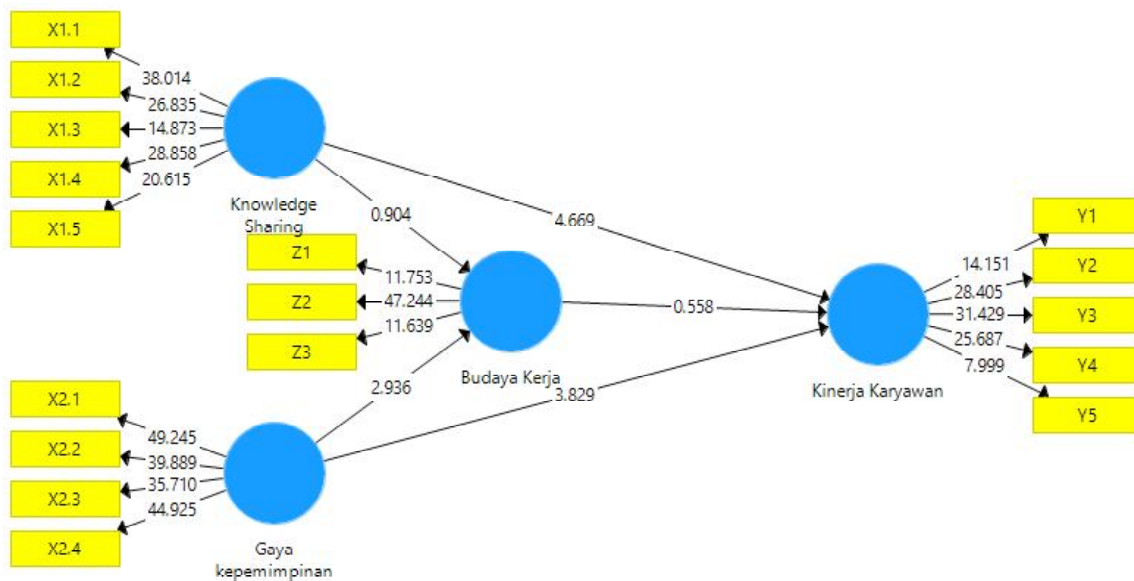

Figure 2. Measurement Model Evaluation Results

Hypothesis Test Results in Research

Hypothesis testing is used to show the level of significance by looking at the path coefficient value or t-statistics from the research results. The number of hypotheses tested in this study was 7 / seven, including testing the coefficients of direct and indirect influence.

DISCUSSION

Knowledge Sharing on Work Culture

The results of hypothesis testing indicate that knowledge sharing has a negative and insignificant effect on work culture. It indicates that knowledge sharing has no influence on the work culture at PT. Cement Bosowa Banyuwangi. This statement is reinforced by the low value of the band coefficient.

The value of the band knowledge sharing coefficient on work culture has the lowest value in this study. Thus the hypothesis, which stated that knowledge sharing has an effect on work culture, is rejected, or H1 is rejected. Knowledge sharing has a negative and insignificant effect on work culture caused by the lack of emphasis on the development and implementation of knowledge sharing that can encourage employees to give ideas or innovations for the advancement of the Bosowa Banyuwangi cement industry. The leadership role greatly influences the implementation of knowledge sharing in organizational life. Therefore, leaders need to pay attention to the activities that exist in knowledge sharing so that employees can be more focused on supporting performance improvements. This can make employees more quickly achieve goals.

Table 10. Hypothesis Testing Results

Correlation	Original Sample	T Statistic	T table	P Values
Direct Effect				
H1: <i>Knowledge Sharing</i> → Work Culture	-0,1950	0,9040	1,6610	0,3670
H2: Leadership → Work Culture	0,6320	2,9360	1,6610	0,0030
H3: <i>Knowledge Sharing</i> → Employee Performance	0,4990	4,6690	1,6610	0,0000
H4: Leadership → Employee Performance	0,4260	3,8290	1,6610	0,0000
H5: Work Culture → Employee Performance	0,0320	0,5580	1,661	0,5770
Indirect Effect				
H6: <i>Knowledge Sharing</i> → Work Culture → Employee Performance	-0,0060	0,3630	1,661	0,7170
H7: Leadership → Work Culture → Employee Performance	0,0200	0,5380	1,661	0,5910

Leadership Style on Work Culture

The results of this study indicate that the influence of knowledge sharing on work culture is not significantly different from the results of previous studies by Indah and Chamariyah (2017), Mardlillah and Rahardjo (2017); Astitiani and Sintaasih (2019); Safitri et al. (2018); which stated that knowledge sharing could improve employee performance. This research is in line with the results of research from Saeed (2016), which stated that there is a lack of effective application of knowledge sharing on the object of his research because the guidance from the manager regarding effective practices in the implementation of knowledge sharing such as sharing ideas and learning to others is very minimal. The results of hypothesis testing indicate that leadership style has a positive and significant effect on work culture, characterized by a high positive band coefficient value. Thus, the hypothesis that leadership affects work culture is accepted or H2 is accepted. This indicates that the leadership style has a role in the work culture at PT. Cement Bosowa Banyuwangi. Good performance is shown by leaders who always monitor employees and provide direction to employees which have an impact on the implementation of the values instilled in this industry. This statement is reinforced by the respondents' answers with the answers agree and strongly agree on these

two variables. The leadership task is very important in being responsible for the formation and development of the existing work culture within the company, namely by identifying and communicating values and principles that can help run the company as well as making decisions and establishing behaviors that are examples of company values. Leaders can set an example and master the company's work culture as a whole and know well the positive and negative sides. Leaders can reinforce values on the things that are expected by the cement industry they lead. These findings indicate that the supportive leadership style has a high loading factor value compared to other indicators in the Bosowa Banyuwangi cement industry which directly affects work culture on the norm indicator as the dominant indicator in forming latent variables with positive and significant correlations. This means that the better the application of a supportive leadership style will strengthen the work culture by complying with all regulations that apply to the Bosowa Banyuwangi cement industry. With the strong work culture applied to PT. Semen Bosowa Banyuwangi is a potential company that can continue to be socialized and internalized legally and formally to employees. The results of this study support the results of previous research conducted by Sasingkelo et al. (2016), Hardimon et al. (2017), and Rizqina

et al. (2017), which shows that there is a positive and significant influence between leadership style and work culture. That is because the leadership has a great influence and authority over employees in applying work culture in PT. Cement Bosowa Banyuwangi.

Knowledge Sharing on Employee Performance

The results of the hypothesis test state that knowledge sharing has a positive and significant effect on employee performance. It indicates that knowledge sharing influences employee performance at PT. Cement Bosowa Banyuwangi. This statement is reinforced by the high value of the band coefficient. Thus, the hypothesis that knowledge sharing affects performance is accepted, or H3 is accepted. The results of descriptive statistical analysis with the highest mean value lie in the embodied knowledge indicator with the highest agreed answer compared to other indicators. This statement received the highest response because employees felt that the emergence of ideas or innovations from each individual needed to be realized by sharing knowledge about the progress of the Bosowa Banyuwangi cement industry. Knowledge sharing has a positive and significant effect on employee performance due to the great emphasis on the development and implementation of knowledge sharing that can encourage employees to give ideas or innovations for the advancement of the Bosowa Banyuwangi cement industry. The leadership role greatly influences the implementation of knowledge sharing in organizational life. Therefore, leaders need to pay attention to the activities that exist in knowledge sharing so that employees can be more focused on supporting performance improvements. The results of this study support the results of previous research conducted by Indah and Chamariyah (2017), Mardillillah and Rahardjo (2017); Astitiani and Sintaasih (2019); Safitri et al. (2018); Aristanto (2017) which stated that knowledge sharing has a positive and significant effect on employee performance. It shows that the knowledge sharing built at PT. Semen Bosowa Banyuwangi gives good results and has an impact on improving employee performance in this industry.

Leadership Style on Employee Performance

The results of the hypothesis test state that leadership style has a positive and significant effect on employee performance. The leadership style applied to PT. Semen Bosowa Banyuwangi can improve employee performance. It is supported by the high band coefficient value generated between these two variables. Thus, the hypothesis that leadership has an effect on performance is accepted, or H4 is accepted. There is a relationship between leadership style and employee performance, seen from the indicators that support the leadership style, including supportive leadership, directive leadership, achievement-oriented leadership, and participatory leadership. These four indicators have high values, which indicate that the four. The highest mean value lies in the supportive leadership indicator. The high mean value is related to the leadership role in bringing employees to be able to complete their tasks according to standards, and employees can complete tasks in the allotted time. The encouragement the leadership gives can motivate employees to be more active in producing quality cement products and meeting production targets. So that market demand from the Java, Bali, and West Nusa Tenggara regions can be met by the Bosowa Banyuwangi cement industry. These findings are in line with previous studies, including Mudawiyah et al. (2019), Basit et al. (2017), (Chandra et al., 2020), (Priyono et al., 2018), (Qomariah, 2020b), (Kurniawan et al., 2021), (Atikah and Qomariah, 2020), (Qomariah et al., 2020c), (Qomariah, 2012), (Priyono et al., 2018), (Wardani et al., 2017), (Bentar et al., 2017), (Sya'roni et al., 2018), (Hendrawan and Budiarta, 2018), (Setiawan and Qomariah, 2022), (Qomariah et al., 2020c). Supportive leadership, directive leadership, achievement-oriented leadership, and participatory leadership can improve employee performance. It means that the leadership style at PT. Semen Bosowa Banyuwangi can be maintained.

Work Culture on Employee Performance

The results of the hypothesis test state that work culture have a positive but not significant effect on employee performance. This statement indicates that work culture does not affect the performance of

PT. Cement Bosowa Banyuwangi. Thus, the hypothesis that work culture affects employee performance is rejected, or H5 is rejected. The highest mean value lies in the regulatory indicator, which is marked by the respondents giving the highest agree answer on the work culture variable. The answer agrees with the statement: "I always comply with all applicable regulations in the company." It is very important to implement regulations in companies to ensure a balance between the rights and obligations of workers, as well as between the authorities and obligations of employers. Regulations provide guidelines for employers and workers to carry out their duties and obligations, creating a harmonious, safe, and dynamic working relationship between workers. And entrepreneurs, in a joint effort to promote and ensure the continuity of the company, as well as improve the welfare of workers and their families. The results of this study support the results of previous research conducted by Giri (2011) (Qomariah, 2012) (Atikah and Qomariah, 2020), who stated that work culture has a positive but not significant effect on employee performance. It showed that the work culture was built at PT. Semen Bosowa Banyuwangi has no effect on improving performance in this industry.

The Effect of Knowledge Sharing on Employee Performance Through Work Culture

The results of the hypothesis test state that knowledge sharing has a negative and insignificant effect on employee performance through work culture. The insignificant effect can be seen through the t statistic, smaller than the t table, and the band coefficient value. The results of this hypothesis indicate that the work culture built at PT. Semen Bosowa Banyuwangi has not been maximal in mediating knowledge sharing with employee performance, so Knowledge Sharing cannot improve employee performance through work culture. Work culture does not play a role as a mediating variable because it has no influence on changes in knowledge sharing with employee performance. The analysis results show that the direct relationship between knowledge sharing and employee performance has a higher band value. At the same time,

the indirect relationship is through the mediating variable of work culture with a band coefficient value. It shows that the work culture has not been able to mediate between knowledge sharing and the performance of employees of PT. Cement Bosowa Banyuwangi.

The Influence Of Leadership Style On Employee Performance Through Work Culture

The results of the hypothesis test state that leadership style has a negative and insignificant effect on employee performance through work culture. The insignificant effect can be seen through the t statistic, which is smaller than the t table value and the band coefficient value. The results of this hypothesis indicate that the work culture built at PT. Semen Bosowa Banyuwangi has not been maximal in mediating between leadership style and employee performance, so leadership style cannot improve employee performance through work culture. Work culture has less role as a mediating variable because it has no influence on changes in leadership style with employee performance. The analysis results show that the direct relationship between leadership style and employee performance has a higher band value, while the indirect relationship is through the mediating variable of work culture with a band coefficient value. It shows that work culture has not been able to mediate between leadership style and employee performance at PT. Cement Bosowa Banyuwangi.

CONCLUSIONS

Based on the theory and previous research, as well as the research findings described in the previous chapter, the conclusions in this study are the first. Namely, the test results prove that knowledge sharing has a negative and insignificant effect on the work culture at PT. Cement Bosowa Banyuwangi. The second conclusion is that the test results prove that leadership style has a positive and significant effect on the work culture at PT. Cement Bosowa Banyuwangi. The third conclusion is that the test results prove that knowledge sharing positively and significantly affects employee performance at PT. Cement Bosowa Banyuwangi. The

fourth conclusion from the test results proves that leadership style positively and significantly affects employee performance at PT. Cement Bosowa Banyuwangi. The fifth conclusion is that the test results prove that work culture positively but not significantly affects employee performance at PT. Cement Bosowa Banyuwangi. The sixth conclusion is that the test results prove that knowledge sharing has a negative and insignificant effect on employee performance through the work culture at PT. Cement Bosowa Banyuwangi. The seventh conclusion is that the test results prove that leadership style has a negative and insignificant effect on employee performance through the work culture at PT. Cement Bosowa Banyuwangi.

IMPLICATIONS

This research produces several implications for developing theory in human resource management. The first practical implication is that knowledge sharing has no impact on the work culture of PT. Cement Bosowa Banyuwangi. The second practical implication is that leadership style has an impact on employee work culture. The third implication is that knowledge sharing has an impact on employee performance. The fourth practical implication is that leadership style has an impact on employee performance. At the same time, the fifth implication states that work culture has no effect on employee performance. Therefore, it is necessary to improve employee work culture to improve employee performance.

LIMITATIONS

This research still has limitations, and with these limitations, it is hoped that improvements can be made for future research. The limitations in this study include: the first, based on the results of the coefficient of determination, knowledge sharing, and leadership style variables are only able to contribute 21.3% to explain work culture variables and 84.4% to explain employee performance variables. Namely, this research only examines one object of research, namely employees of PT. Cement Bosowa Banyuwangi.

RECOMMENDATIONS

The first suggestion for further research is necessary to add other variables to explain the effect on employee performance. The second suggestion is that the direct influence of leadership style has the greatest value in influencing employee performance because leadership style can be prioritized in employee performance problems. And the third suggestion is that using other variables in further research can impact findings that are more precise in explaining the variables that affect employee performance.
